Unparalleled Property Services

E-Voting is a technology solution that has been available for some time, but has slowly been gaining acceptance in the Association space. During the Covid-19 pandemic interest in the these tools increased as virtual meetings became common as the need to support remote operations became critical. E-Voting tools help simplify and accelerate the voting process in your Association, as well as reduce expenses for paper mailings and postage. Additionally, these tools provide the ability to manage the process, while maintaining anonymity and security.

Vendors who provide these tools deliver different levels of service and support to their customers. These services can range from providing the software to run your own e-vote, all the way to providing turnkey services where the vendor facilitates the vote for you. When moving towards new technology it is important to understand the appropriate steps to ensure proper implementation to fit the needs of your Association.

Castle Group does not endorse or recommend any specific vendor, but the list below provides some of the options available to you.
